

Download Chemical Names And Formulas Review

Formulas and Names of Binary Metal-Nonmetal Compounds. The name of the metal is first (ie: NaCl, sodium chloride) The name of the nonmetal has -ide added (ie: NaCl sodium chloride). IF the metal has more than one possible charge Binary Ionic Formulas - Binary formulas contain two elements. For binary ionic formulas, the first element in the formula will be the cation and second element will be the anion. You may want to use a periodic table to predict the charges of the monatomic ions. How to Name Chemical Compounds. Naming basic chemical compounds is essential if you want to succeed in chemistry, since the name of the compound clearly defines what it is. Each type of compound has its own rules for naming it. When naming...
